Summary

Product-focused Computer Science engineer with 1.5+ years of experience at a fast-paced ed-tech startup, using SQL, experimentation and root-cause analysis to turn ambiguous business questions into decisions. Comfortable owning a problem end to end: user discovery, PRDs, building the measurement framework, running the analysis and shipping the fix, whether that's a product change, a funnel redesign or an automated system.

Experience

Leap Finance

Bengaluru, India

Product Management Intern

Jan 2026 – Jul 2026

- Found that under 10% of leads included parent contact info despite parents being the actual decision-makers on a high-ticket course. Redesigned the ask as a '1:1 Upgrade' instead of a bare form, more than doubling form completion (15–20% to 45%) and lifting parent-lead share to 24%, with parent-linked leads converting over 3.5x better.
- Owned the redesign of a manual invoicing workflow processing 1Cr in monthly payments. Replaced an expensive add-on with a zero-cost architecture, leading AI-assisted implementation that integrated Stripe webhooks, Zoho and Metabase APIs to automate VAT-compliant invoicing and reconciliation, eliminating invoicing errors and saving more than 50 hours of finance effort each month.
- Built the analytics framework that turned a subscription experiment from a black box into a measurable product, engineering cohort-based conversion and retention dashboards from raw production tables. The analysis surfaced weak unit economics, turning a gut call to scale into a data-backed decision to hold.
- Led a cross-functional investigation into a 80L gap between booked and realized revenue, systematically testing hypotheses across reporting errors, installment tracking and refunds. Traced the gap to learner drop-offs and incomplete installments and used the findings to reshape and rebuild the downstream payment tracking system.

Program Associate

Jul 2025 – Jan 2026

- Owned business reporting and analytics for SAT and IELTS-MENA, the dashboards, MIS and funnel metrics leadership used in reviews. Ran root-cause analyses across campaigns, channels and keywords and reallocated ad spend toward higher-converting demand after a revenue dip.
- Ran the QA framework that took an AI speaking evaluator from losing on 4 of 5 criteria to beating human examiners on all 5, iterating the rubric and prompts until it matched human judgment at scale. Shipped as a flagship feature and opened a paid add-on that about 30% of users now purchase.
- Validated CRM data during a workflow migration by running daily sanity checks against manually tracked metrics, tracing discrepancies to root cause & partnering with Analytics to design dashboards for funnel health.

Program Management Intern

Jan 2025 – Jul 2025

- Designed and ran a masterclass-first experiment that pre-qualifies leads in a group session before the costlier one-on-one demo. Only the most serious 8% advanced, versus 15% under the old process. This saved teacher's time and business costs and the leads who did advance converted 1.5 times better. Later adopted in BAU.
- Increased class attendance from under 25% to 70% by resolving a critical WhatsApp deliverability issue. Identified operational messages being misclassified as marketing, reduced the delivery failure rate from 57% to under 1%. Also built automated payment reminder flows that now drive about 11% of all payments.

Skills

Analytics & Data: SQL, cohort & retention analysis, root-cause analysis, A/B testing & experiment design, funnel & conversion analytics, dashboarding (Mixpanel, Metabase).

Product: Product discovery, user research (interviews + funnel analysis), PRDs & user stories, product analytics & metric definition, lifecycle marketing, cross-functional execution

Technical & Tools: Python, JavaScript, C/C++, Google Apps Script, REST APIs & webhooks, AI/LLM tooling (Claude), Stripe, Zoho Books, Zapier, Jira, Figma, LeadSquared, WebEngage

Education

Maulana Azad National Institute of Technology (NIT Bhopal)

2021 – 2025

B.Tech, Computer Science & Engineering · CGPA 7.69

Leadership & Activities

- Leadership: President of NIT Bhopal's Debating Society and Head of Sponsorship & Marketing at the ISTE Student Chapter (corporate partnerships and funding for pan-India events including TEDxMANITBhopal).
